

INSTALLING INTRANET WITH ORACLE

Installing IntraNet

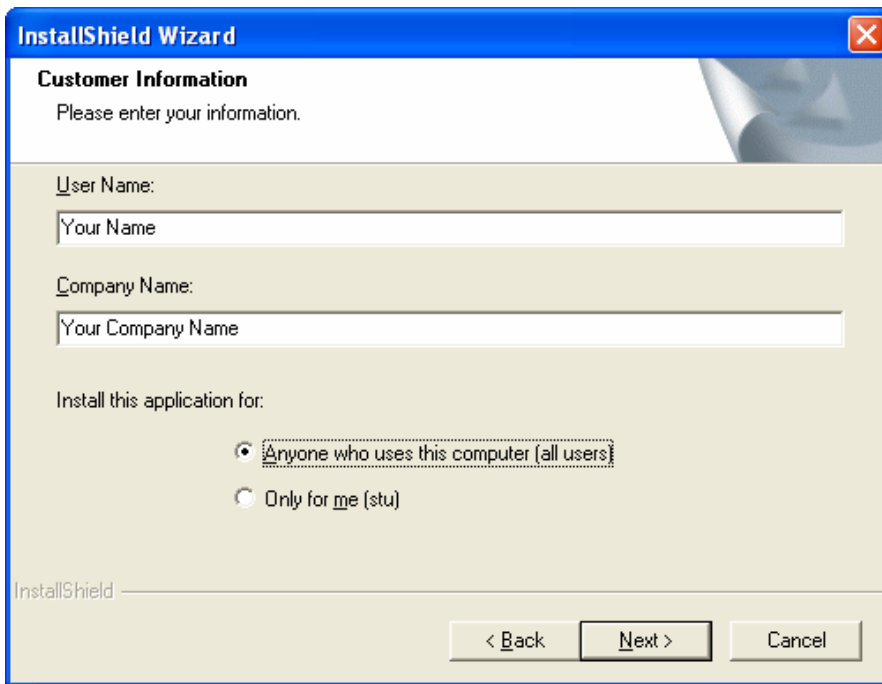

If at any time you are unhappy with options you have chosen during the installation process, you may select 'Back' to review and change any options you have chosen, or press 'Cancel' to escape the installation process completely.

1. End User License Agreement

Read over the terms of the License Agreement and click 'Yes' when you are ready to continue.

2. Customer Information

In the text areas provided, enter your user name and company name. You may also specify if IntraNet is to be available to all users. This is important if you are using a shared computer. If you wish the IntraNet software to be available to yourself only, click the lower radio button marked 'Only for Me (username)'. If you wish to make the IntraNet software available to all users, you may leave it at the default as shown below:

The screenshot shows a window titled "InstallShield Wizard" with a close button in the top right corner. The main heading is "Customer Information" with the instruction "Please enter your information." Below this, there are two text input fields: "User Name:" with the placeholder text "Your Name" and "Company Name:" with the placeholder text "Your Company Name". Underneath these fields, the text "Install this application for:" is followed by two radio button options: "Anyone who uses this computer (all users)" (which is selected) and "Only for me (stu)". At the bottom of the window, there are three buttons: "< Back", "Next >", and "Cancel". The "InstallShield" logo is visible in the bottom left corner of the dialog box.

When you are satisfied that this information is correct, click the 'Next' button to continue.

3. Choose Destination Location

IntraNet is set by default to install to c:/Program Files/IntraNetVX/, X signifying the version of the software that you are installing. If you wish to install IntraNet at a different location, click 'Browse' and select a new location for IntraNet. When you are satisfied with the location for IntraNet installation, click 'Next' to continue.

4. Database Server

This is where you will choose what type of database will be used by the IntraNet software. Select the 2nd radio button, marked 'Oracle', and click 'Next' to continue.

5. Database Information

This is where you will connect to the database that you should have already created using Oracle:

Service Name: Enter the name of the Oracle database service to be used with this installation of IntraNet.
SQL Login: Here you should enter the Login Name specified during the creation of your MSSQL database.
Password: Enter the password to the database, again specified during creation of the database.

6. IntraNet Port Number

This should be set as default to port 80. If you wish to install IntraNet on another port, please specify which port you wish to use in the area provided. Please ensure that no other web services are on the port on which you wish to run the IntraNet software. Click 'Next' when you are ready to proceed.

7. Multiserver Admin Password

This option allows you to set the password for IntraNet's diagnostic support tool and is required to continue the installation process. Click 'Next' when you have entered a password and are ready to continue installation.

8. Start Copying Files

This section allows you to review the options you have chosen for your IntraNet installation. If you wish to change any of the settings shown, use 'Back' button to return to the appropriate section. When you are satisfied with the parameters that will be used, click 'Next' to begin installation.

You will now be required to restart your machine to complete installation.

9. Database Pre-Load

Double clicking the 'intraNET V5 Login' icon will take you to the 'Database Preload' screen. Here you will be prompted to enter the license key. Simply copy and paste the 2nd line of the 'license_key.txt' file into the indicated text area and click on 'Begin Database Preload' to begin the installation of the database. You should then see a white screen with intraNET X.X.X Preload status, with X.X.X indicating the version of the software. After completion, you should see a number of completed tasks appear, along with a corresponding date and time. The username and password should be displayed at the top of the page, along with a link to the intraNET.

You have now successfully installed IntraNet with Oracle.
